

Comrex EarShot IFB Is Now Shipping

EarShot IFB is a Voice-over-IP solution for TV IFB

DEVENS, MA, Jan. 9th 2019 -- [EarShot IFB](#), a new VoIP-based auto coupler for IFB and listen lines from Comrex, is now shipping. EarShot IFB is designed to help TV stations reduce costs and provide more flexibility for remote IFB feeds.

Introduced at NAB 2018, EarShot IFB provides telephone-based live studio program and IFB audio to field-based remote broadcasts. Up to 30 users can listen to program or IFB feeds by calling into EarShot IFB with a standard telephone. EarShot IFB has four audio inputs (or feeds). Two of the feeds can be alternately configured as IFB inputs. Callers can switch between the feeds using DTMF (Touch Tone) selection.

For higher fidelity, the Comrex [FieldTap](#) smartphone app can be used to pull audio in studio quality. FieldTap uses the Opus audio decoder to deliver studio quality audio, and is available to download for free on iOS and Android.

To receive a quote and place an order, [contact an authorized Comrex dealer](#).

About Comrex

Comrex has designed and manufactured broadcast equipment since its incorporation in 1961. Since then, Comrex has consistently developed the most innovative technology to address the specific needs of broadcasters, and create products that enable broadcasters to produce live, local, imaginative remote programming. Comrex strives to provide a simple answer to a universal broadcast need - the transportation of high-quality media to the studio from virtually anywhere, economically, at a moment's notice. As methods of audio and video transportation evolve, Comrex works to develop technology that will allow broadcasters to easily achieve creative and entertaining programming, from diverse and unique locations.
